FN-25

ASP.NET MVC: Qualidade no Desenvolvimento Web

11,11% concluído - 920 pontos

Explicação

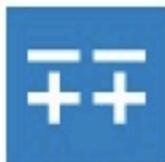

Um problema muito comum que temos é controlar nossos gastos durante o ano, por exemplo, para compararmos quanto a mais gastamos em janeiro e dezembro nas festas de final de ano do que com o quanto gastamos durante período de férias de meio de ano com os gastos de supermercado.

Armazenar dados, para depois pesquisá-los e manipulá-los é uma necessidade comum no mercado de informática.

Uma possibilidade para realizar esse armazenamento de informações é através de planilhas eletrônicas, como o Excel onde podemos ter algumas colunas tais como dia, valor e motivo da compra. No entanto, apesar de ser um ambiente interessante, o Excel se torna complexo quando precisamos extrair e manipular suas informações. Se necessitarmos utilizar esses dados através de alguma aplicação ou sistema, isso pode se tornar ainda mais complexo, pois se necessário fazer a leitura dos arquivos do Excel para conseguirmos consultar as informações.

CS-17

PM-89

traditional online learning

The screenshot displays a video player interface. On the left, there is a sidebar with three course icons: 'ASP.net MVC FN-25', 'CS-17', and 'PM-89'. The main video area shows a course titled 'Curso SQL - Cap 1 from Caelum'. The video content is a Windows 7 desktop background with a 'MySQL Server Instance Configuration Wizard' dialog box open. The dialog box has a title bar and a close button. The main content area of the dialog box is titled 'MySQL Server Instance Configuration' and contains the text 'Configure the MySQL Server 5.5 server instance.' and 'Processing configuration ...'. Below this, there are four options with radio buttons: 'Prepare configuration' (checked), 'Write configuration file (C:\Arquivos de programas\MySQL\MySQL Server 5.5\my.i)' (checked), 'Start service' (unchecked), and 'Apply security settings' (unchecked). At the bottom of the dialog box, there are three buttons: 'Back', 'Finish', and 'Cancel'. The video player controls at the bottom show a play button, a progress bar with a time of 06:05, and an HD icon.

Apagar as luzes

traditional online learning

Atividade 1 de 6

Instale o servidor do MySQL em sua máquina e instale também o MySQL Workbench. Qual o sistema operacional em que você fez sua instalação? Sentiu que algo podia ser simplificado no processo de instalação? Lembre-se que você pode realizar o download de ambos em <http://mysql.com/downloads/mysql> e <http://mysql.com/downloads/workbench>.

Adriano

O processo é um simples next next next next.

multiple choice

- sucks?
- is the best/easiest to test ability

Atividade 2 de 8

O que é mais importante ao estudar um padrão de projeto?

Mauricio

- Entender a motivação do padrão de projeto e qual problema ele resolve
- Conhecer o nome e em qual linguagem ele pode ser aplicado.
- Entender apenas a implementação

Atividade 3 de 8 Ver uma dica  Mauricio

Crie todo o mecanismo para flexibilizar a criação de diferentes estratégias de impostos, igual visto no vídeo. Crie a interface `Imposto`, e as estratégias `ICMS` e `ISS`. O `ISS` deve ser 6% do valor do orçamento, e o `ICMS` deve ser 5% do valor do orçamento mais o valor fixo de R\$ 50,00.

Crie a classe `Orcamento`, que tem como atributo um valor. Crie um construtor que recebe esse valor, e um getter para devolvê-lo.

Crie a classe `CalculadorDeImposto`, que recebe um `Orcamento` e um `Imposto`. Essa classe calcula o imposto usando a estratégia recebida e imprime o resultado na tela.

Cole aqui o código dos impostos e do `CalculadorDeImposto`.

```
[java]
public interface Imposto {
}
public class ICMS {
}
public class ISS {
}
//igual
```

what we are trying to do

what we are trying to do

- change the online learning experience, but how?
- KIS: keep it stupid, not simple
- micro teams, throw away if necessary
- protocol and communication are stupid and stable

what it allows

what it allows

- simple
- small stable communication
- unstable projects
- teams that come and go
- knowledge transfer
- freedom to try and trash

the end
