

TensorFlow

Flexible, Scalable, Portable

Rajat Monga
Engineering Director, TensorFlow

Released in Nov. 2015

#1
repository
for “machine learning”
category on GitHub

Some Stats

10,000+ commits since Nov, 2015

450+ contributors

1M+ binary downloads

#20 most popular repository on GitHub by stars

Used in ML classes at many universities:

Toronto, Berkeley, Stanford, ...

ARM

quantiphi

AIRBUS
DEFENCE & SPACE

CIST

CEVA

Google

Movidius

UBER

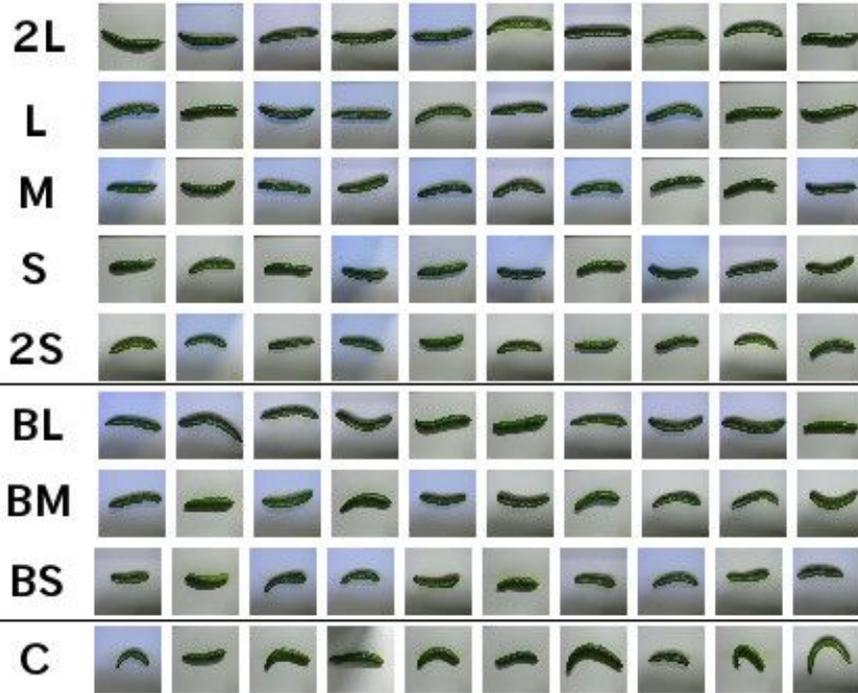

JD.COM 京东

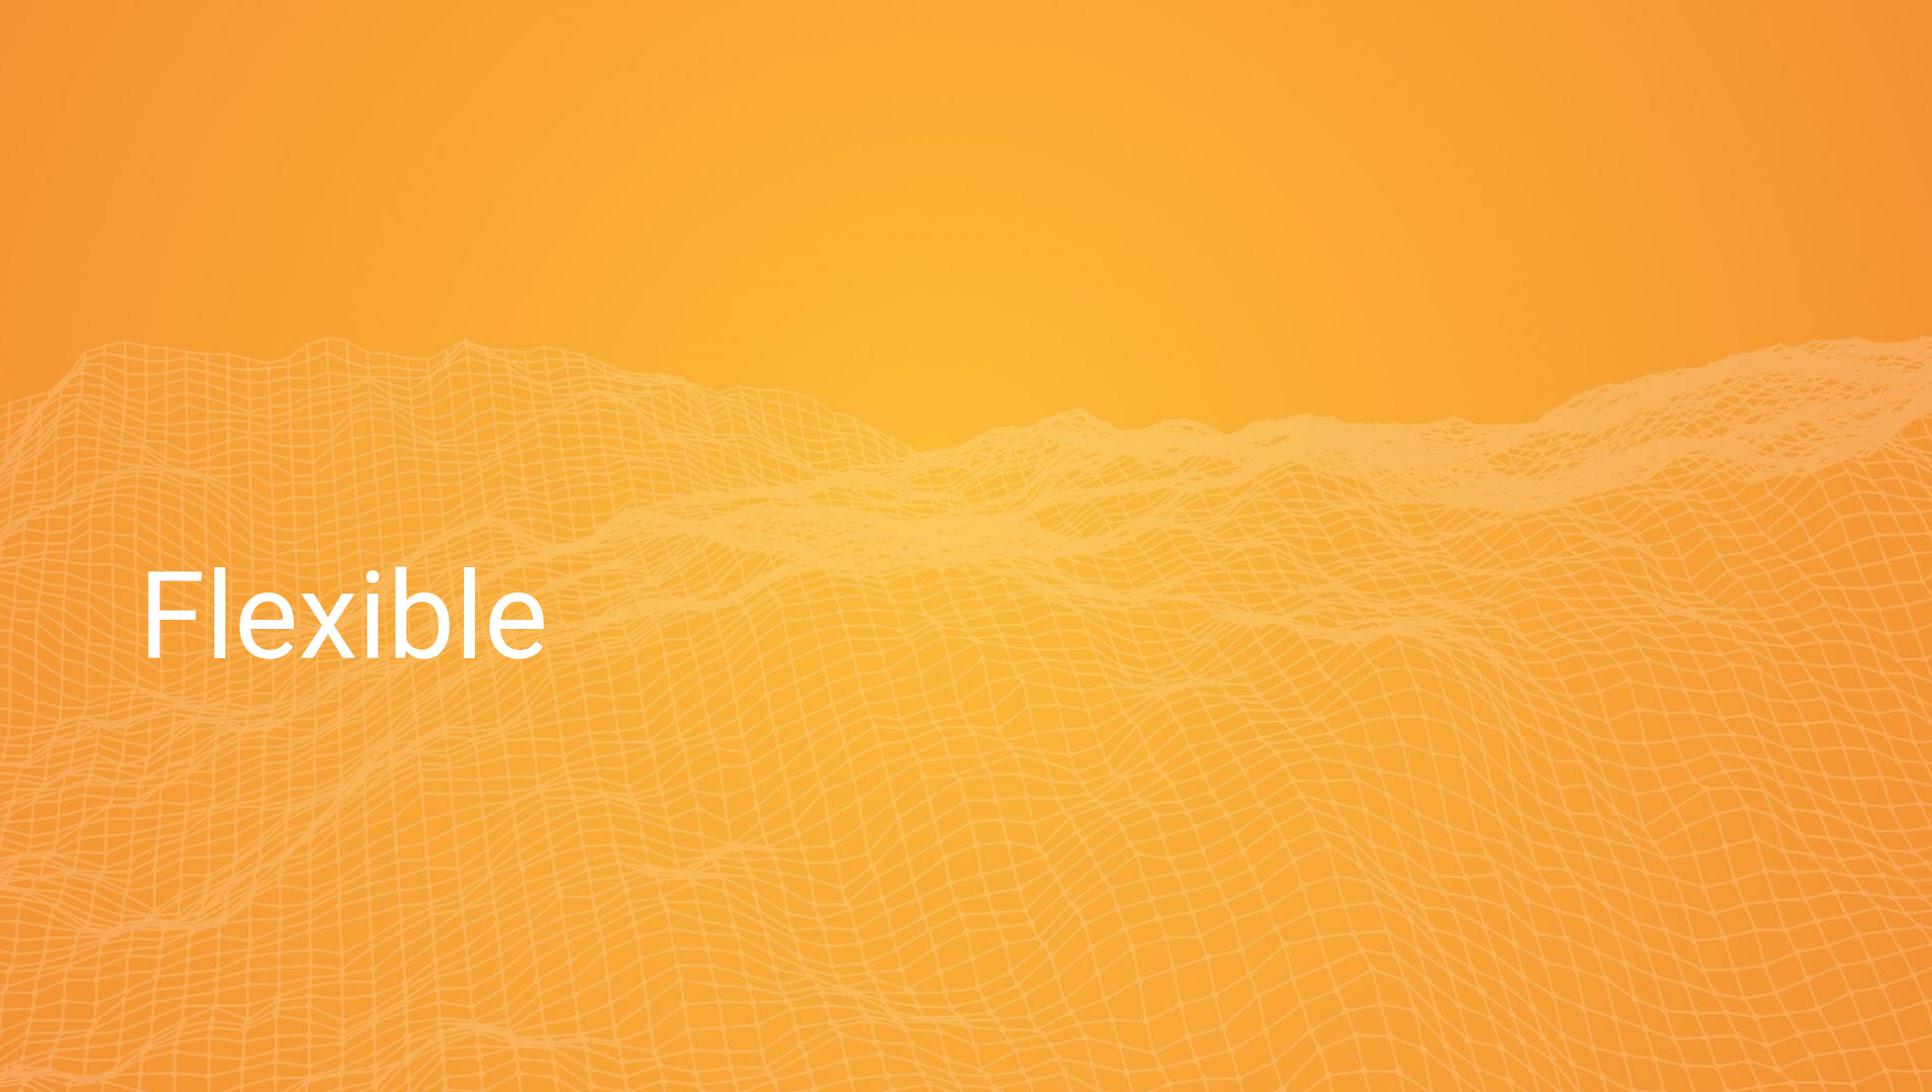

DeepMind

TensorFlow powered Cucumber Sorter

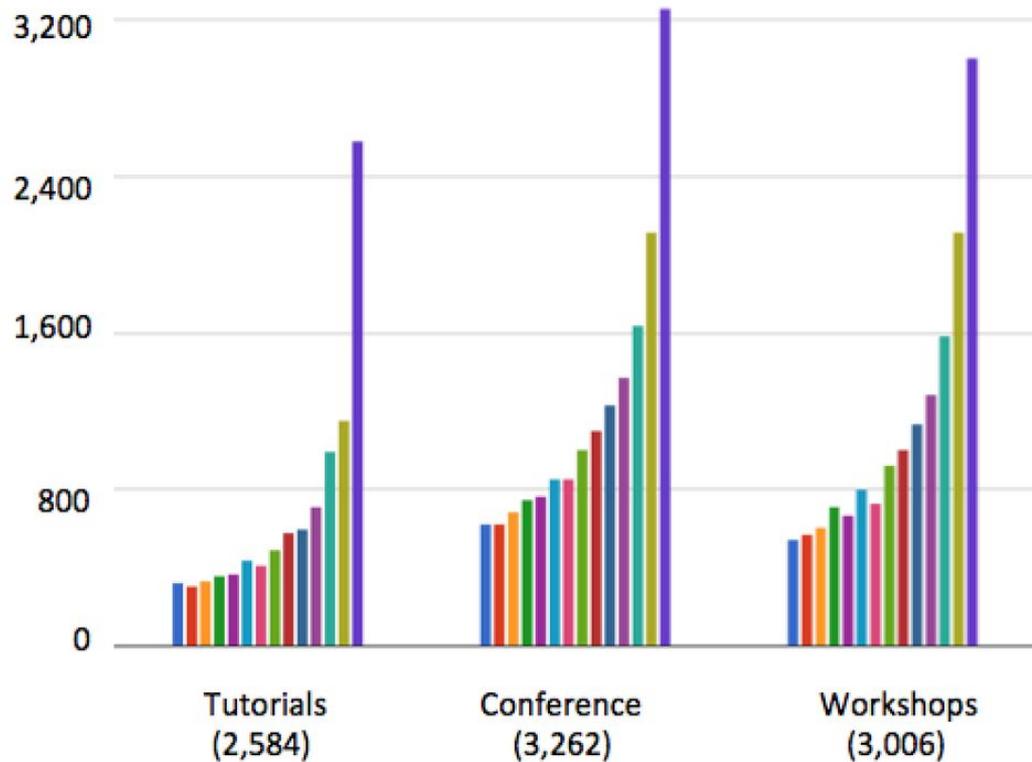

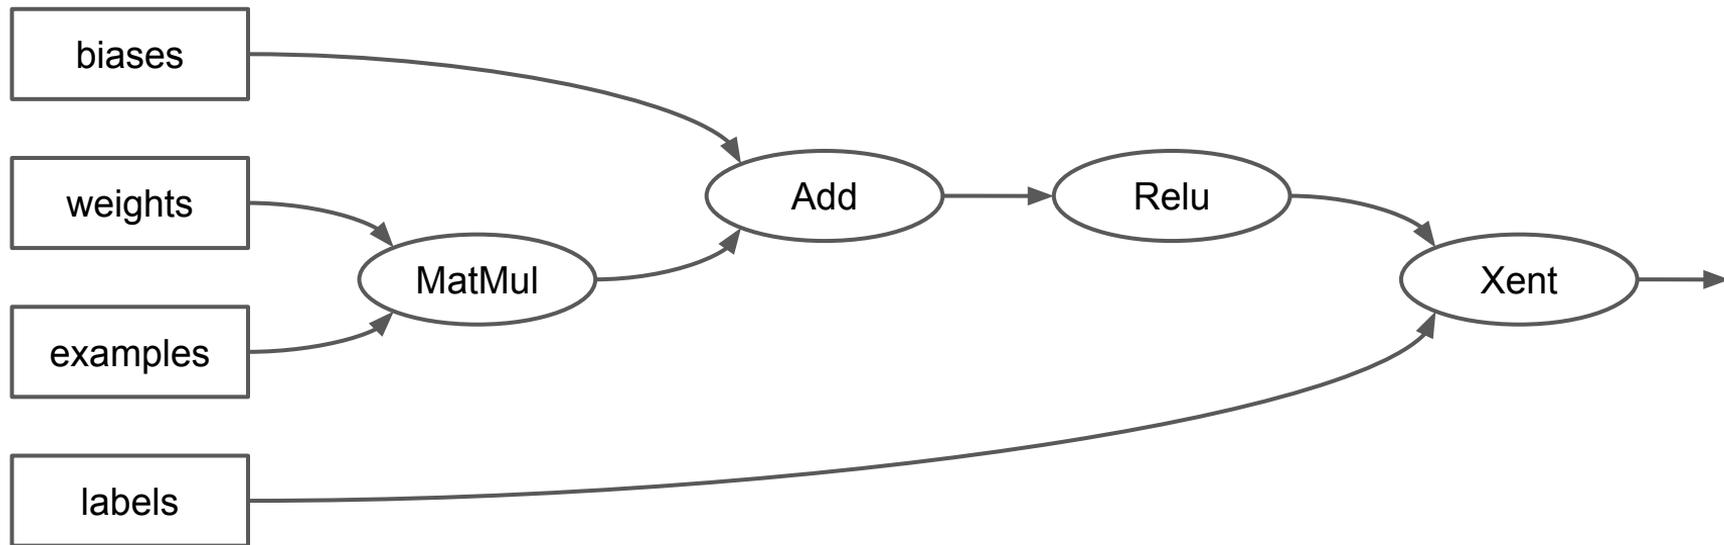

Flexible

NIPS Growth

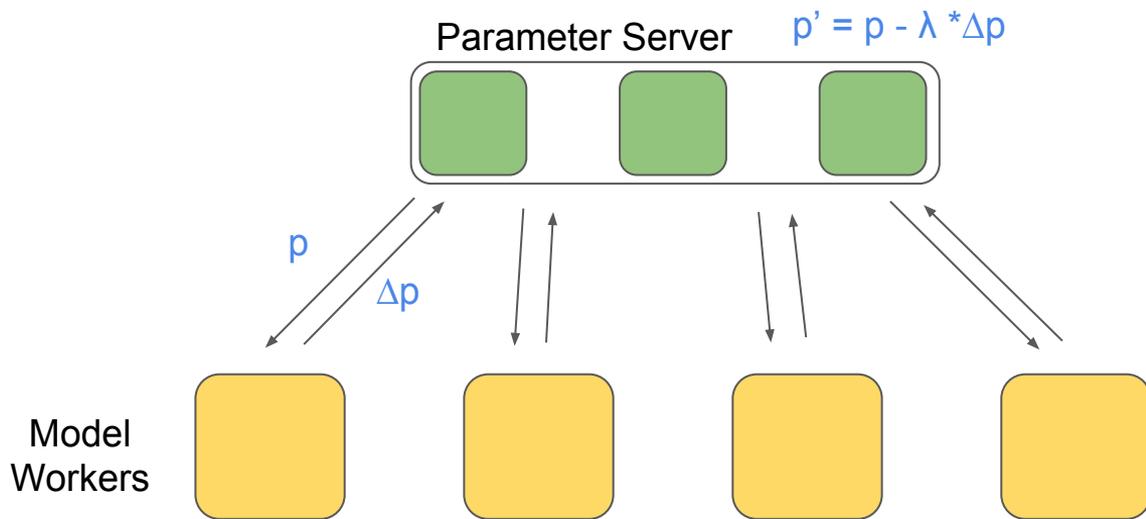

Total Registrations 3755

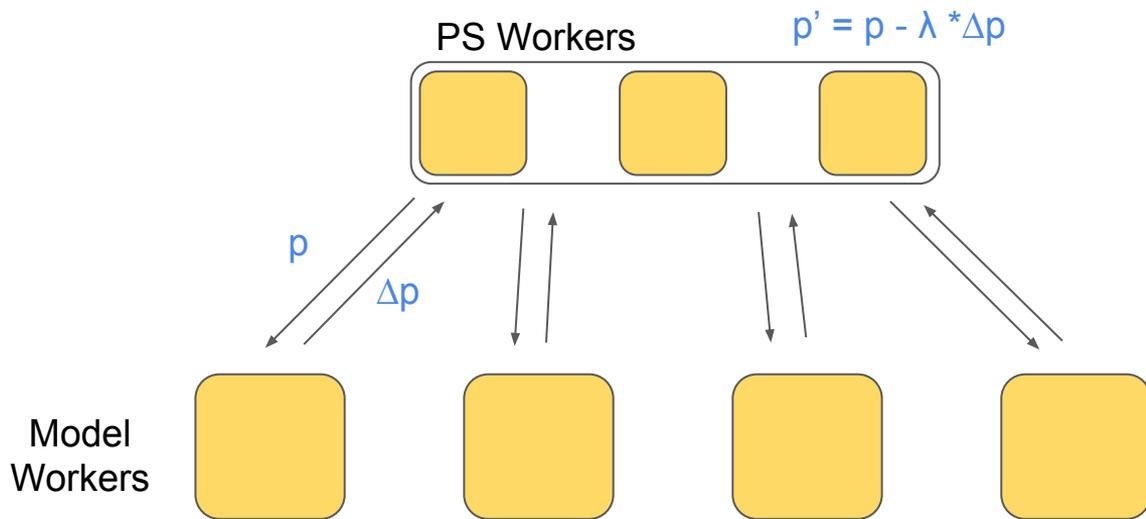

Directed graph

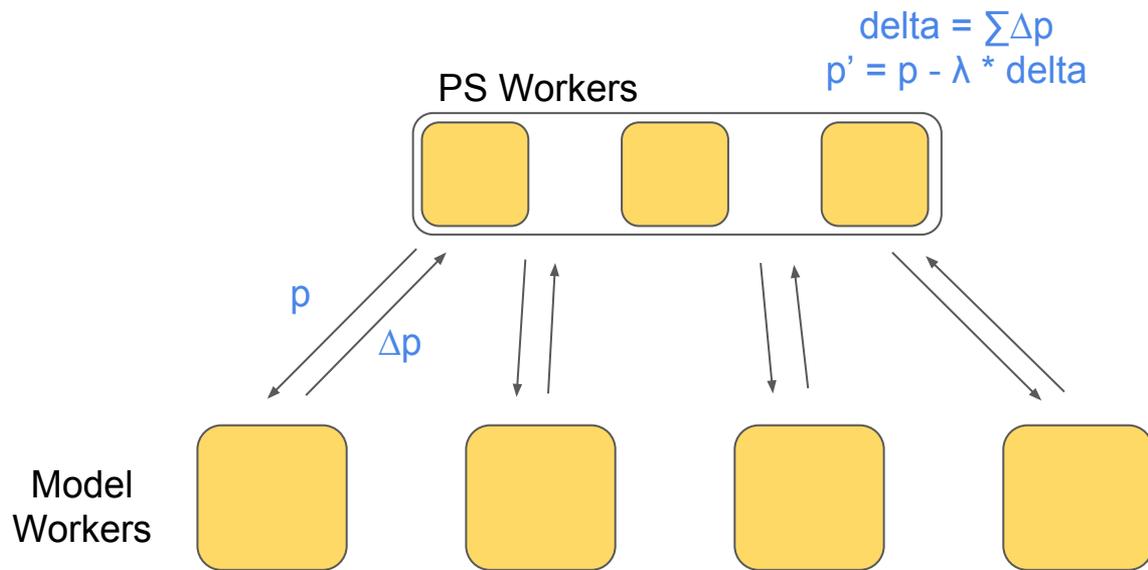

Async SGD with Parameter Server

Async SGD with TensorFlow

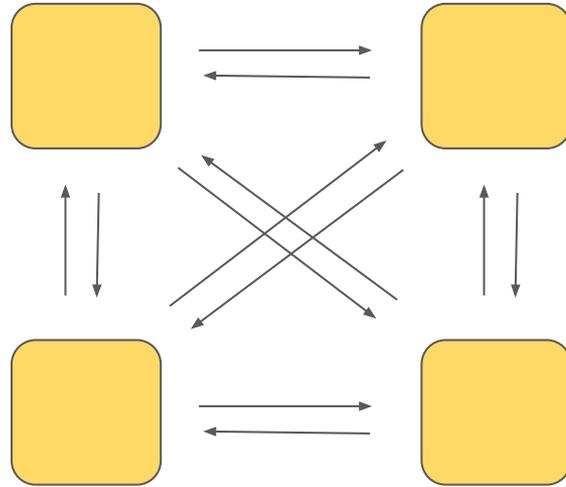

Sync SGD with TensorFlow

Alternate version of Parameter sharing

Workers

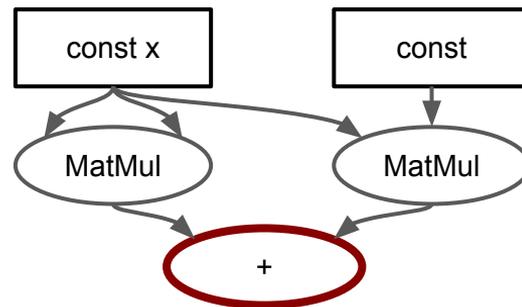

More ML Algorithms

- Clustering e.g. k-means
- Random Forests
- Logistic Regression
- Bayesian methods

Scalable

Deferred Execution

Operations build the dataflow graph; `eval()` fetches the result.

```
import tensorflow as tf
```

```
with tf.Session():
```

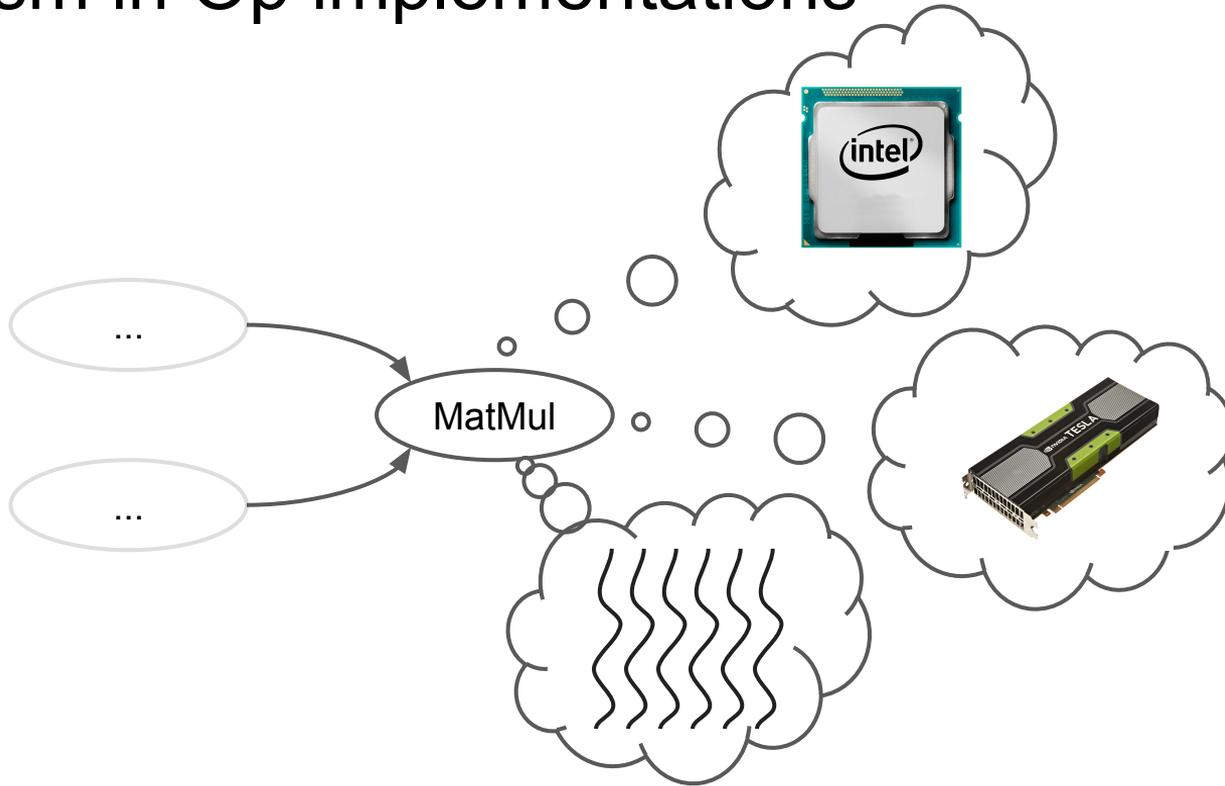

```
    x = tf.constant([[5, 6], [7, 8]])
```

```
    z = tf.matmul(x, x) + tf.matmul(x, [[1, 0], [0, 1]])
```

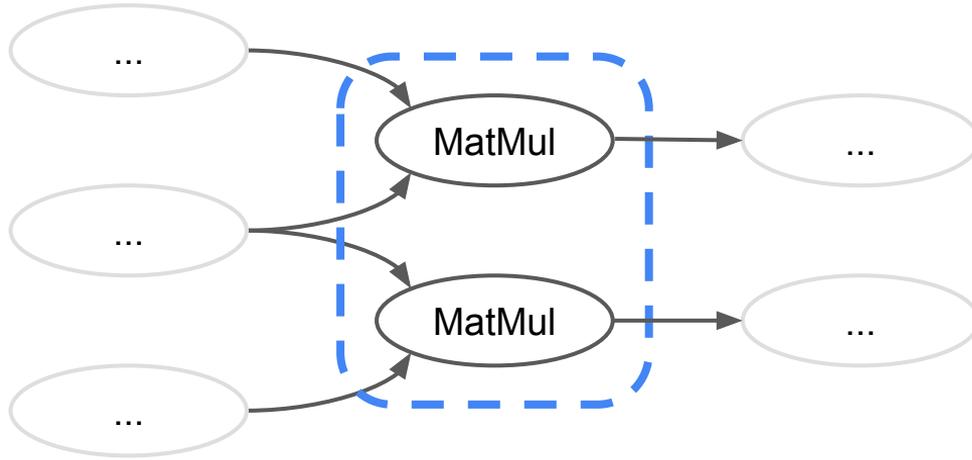

```
    # Run graph to fetch z.
```

```
    result = z.eval()
```

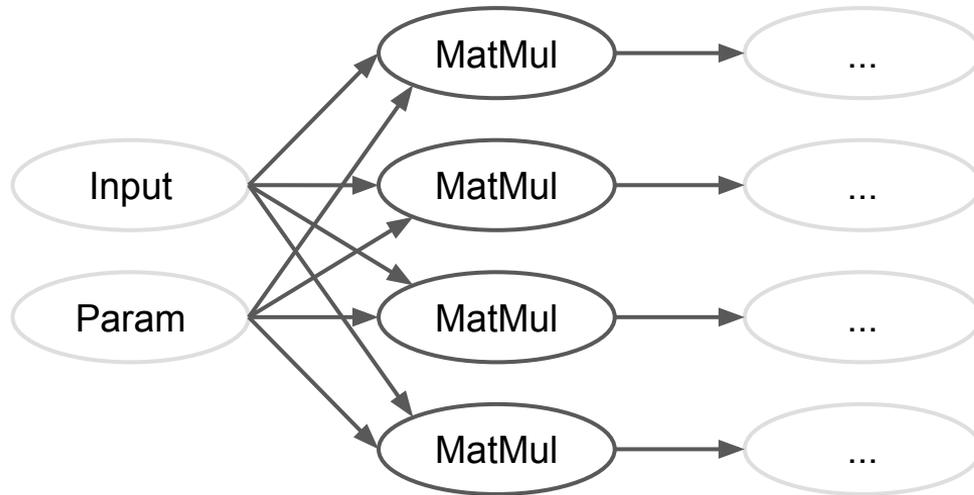

Parallelism in Op implementations

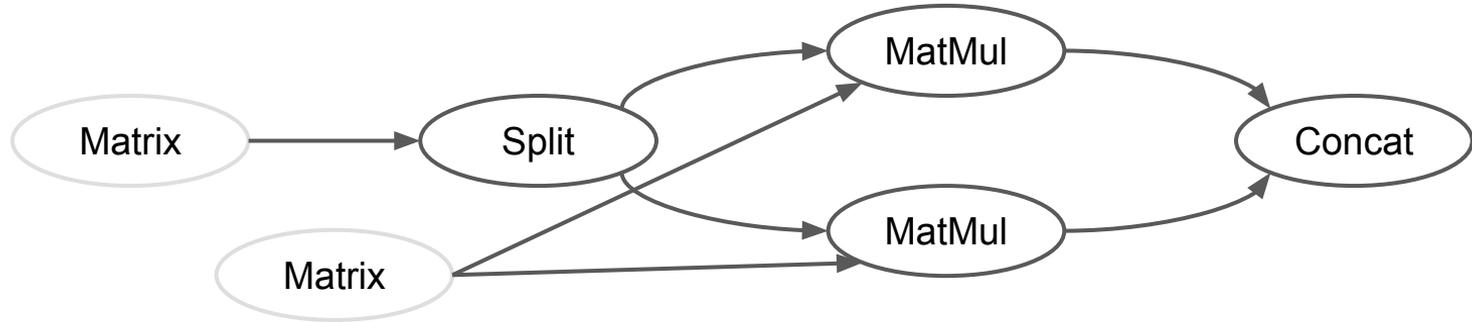

Task Parallelism in DataFlow graph

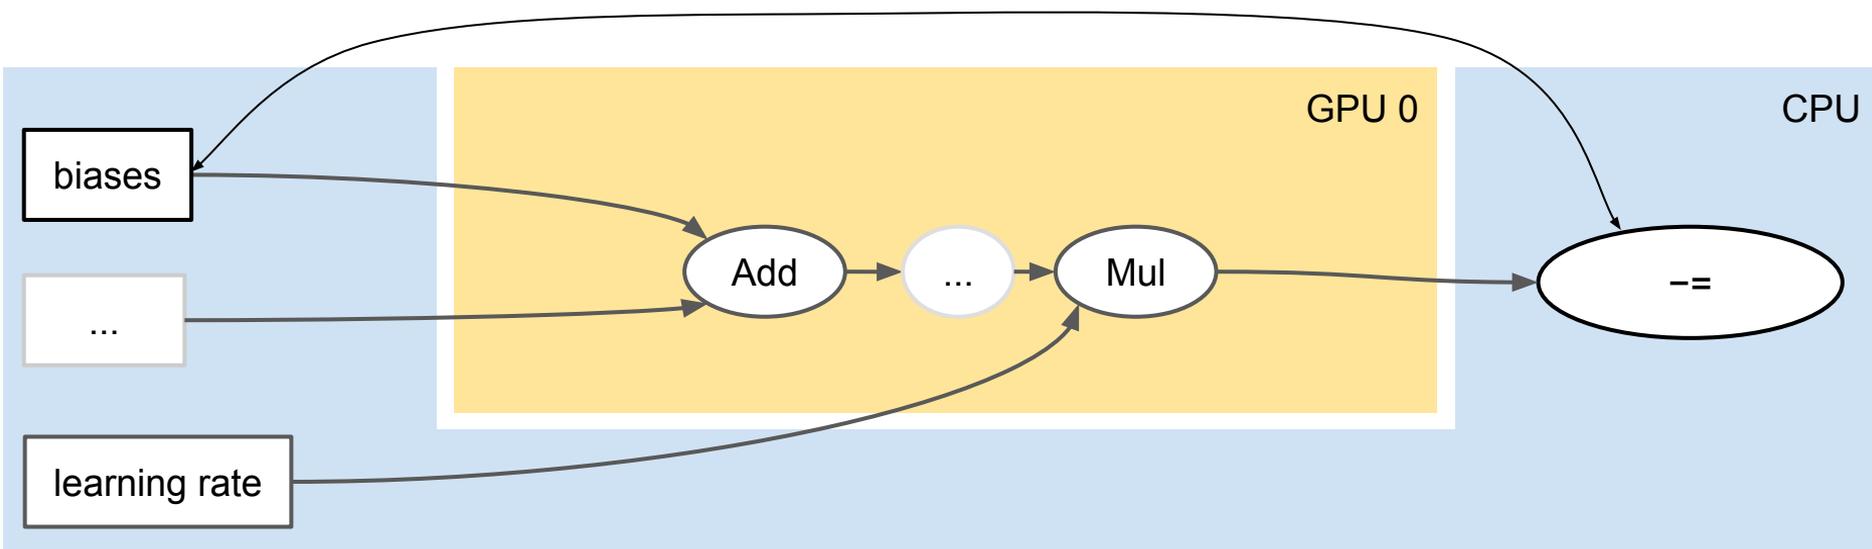

Data Parallelism

Model Parallelism

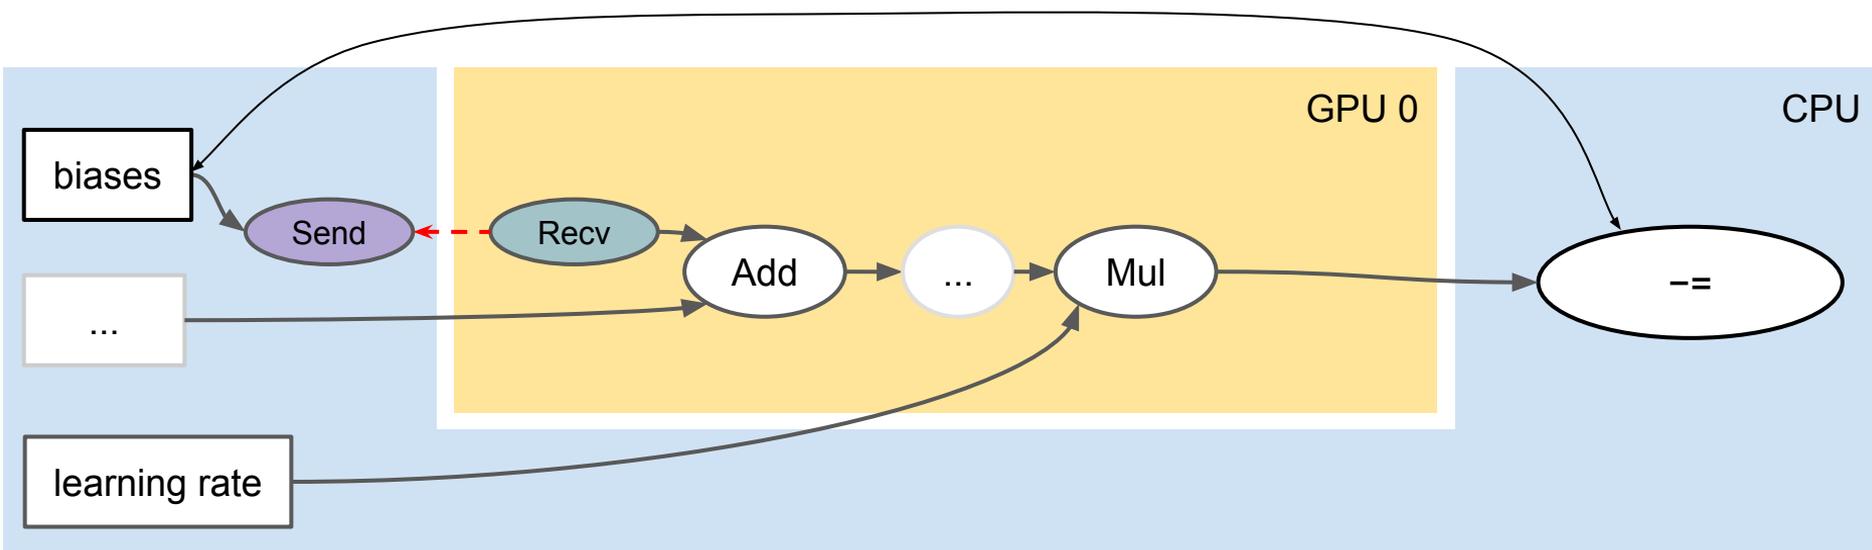

Distribution across Devices

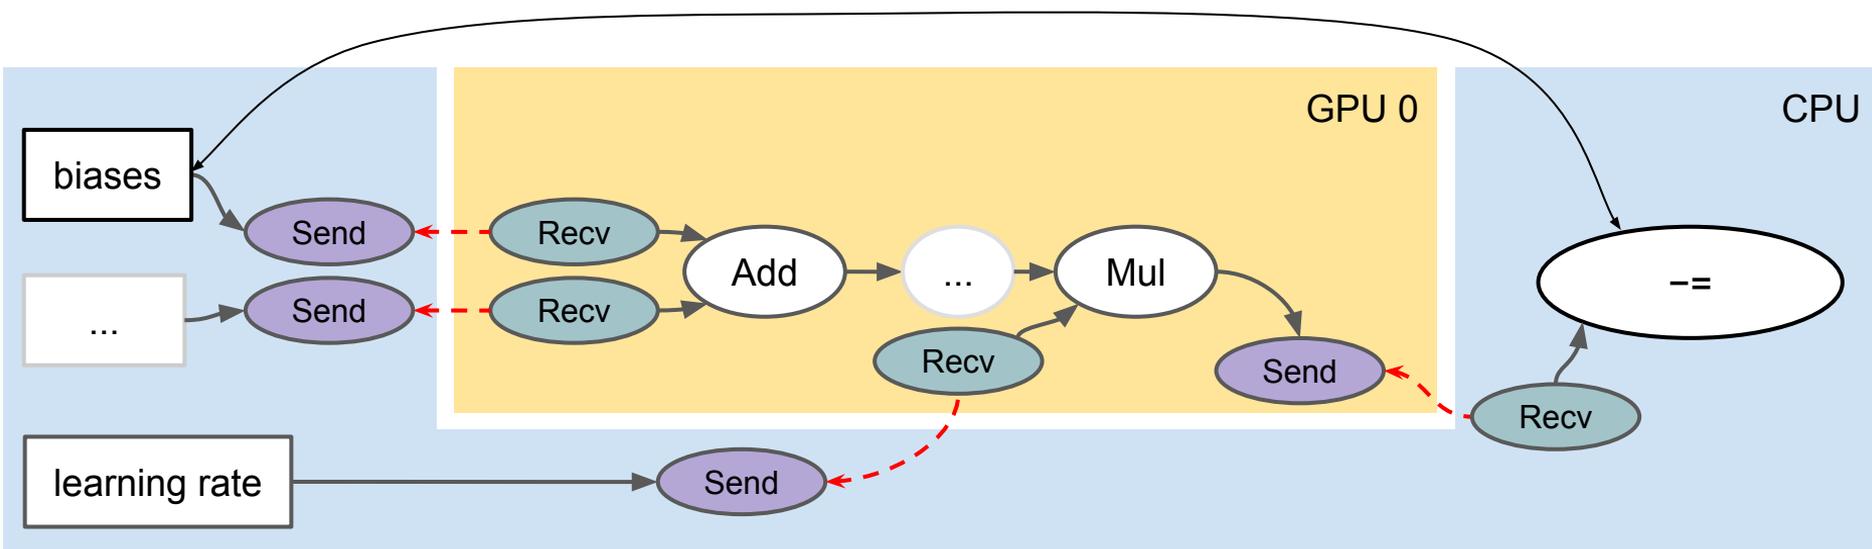

Distribution

- TensorFlow inserts *Send/Recv* Ops to transport tensors across devices
- *Recv* ops pull data from *Send* ops

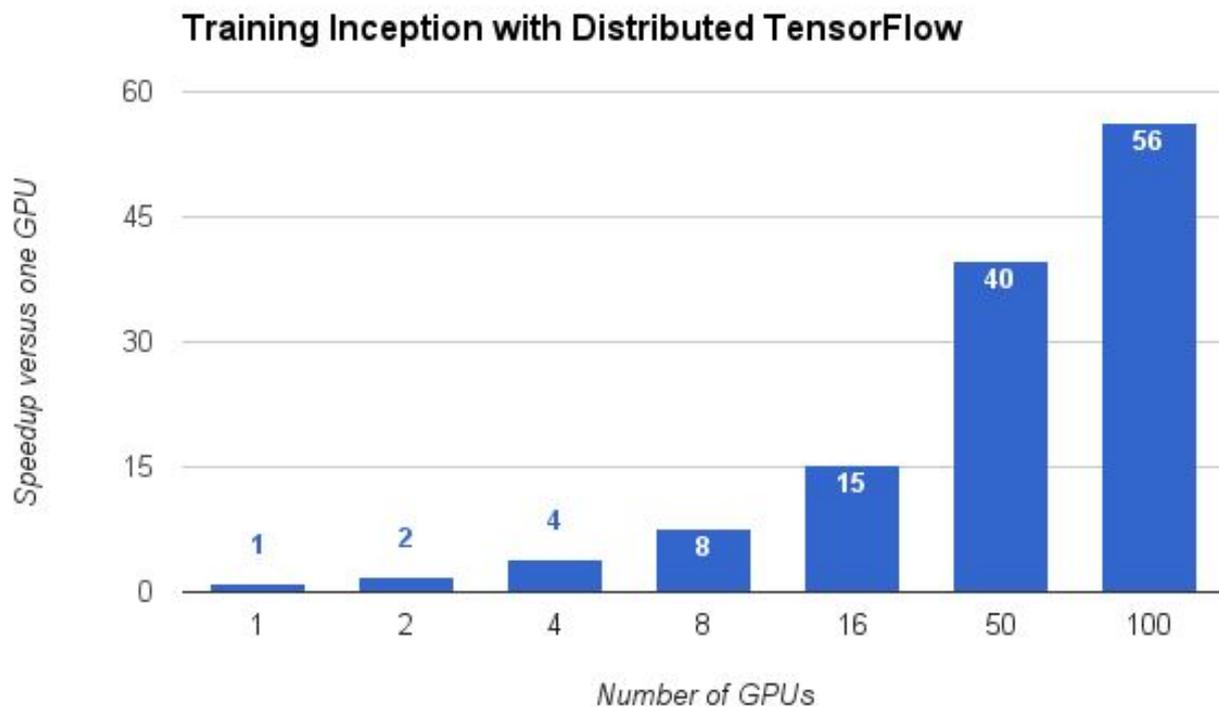

Distribution

- TensorFlow inserts *Send/Recv* Ops to transport tensors across devices
- *Recv* ops pull data from *Send* ops

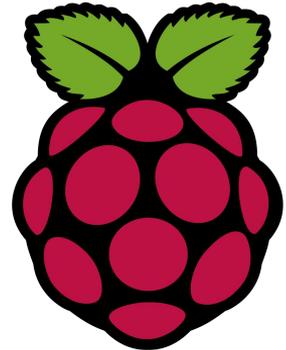

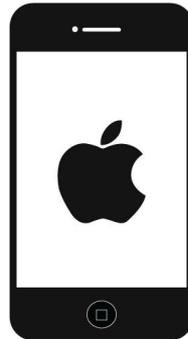

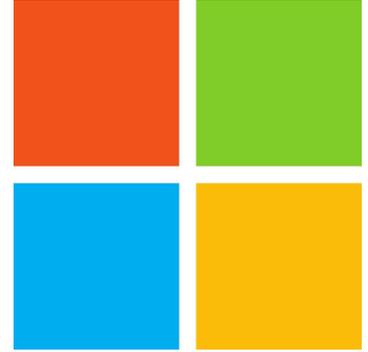

Scale across machines

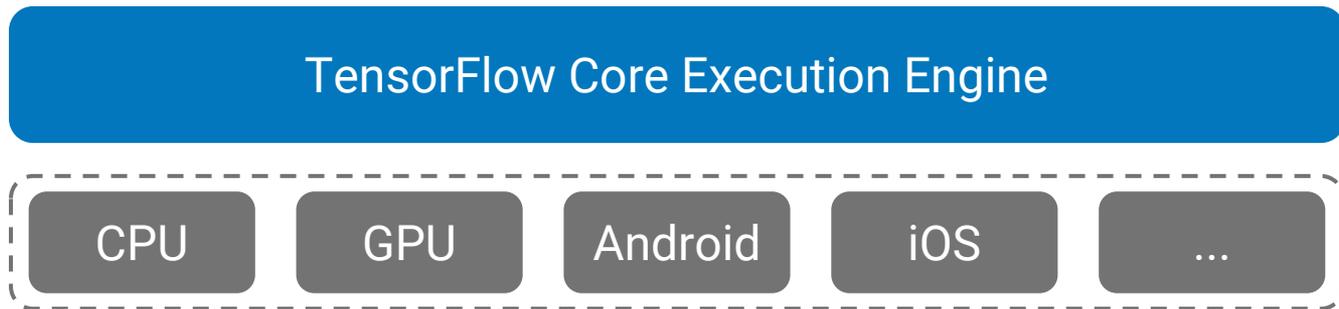

Portable

Platforms

Device Abstraction

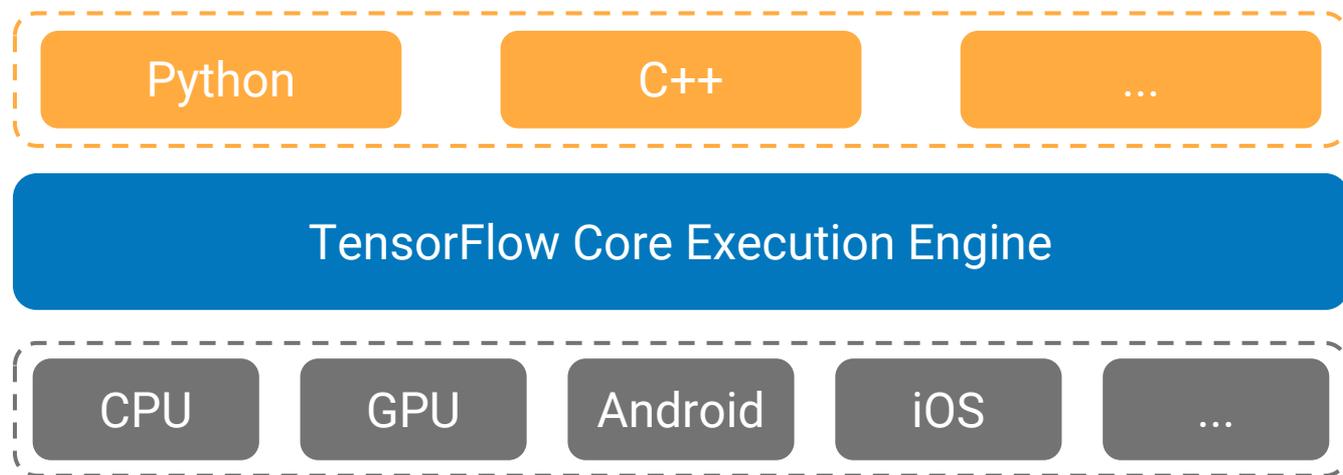

Languages

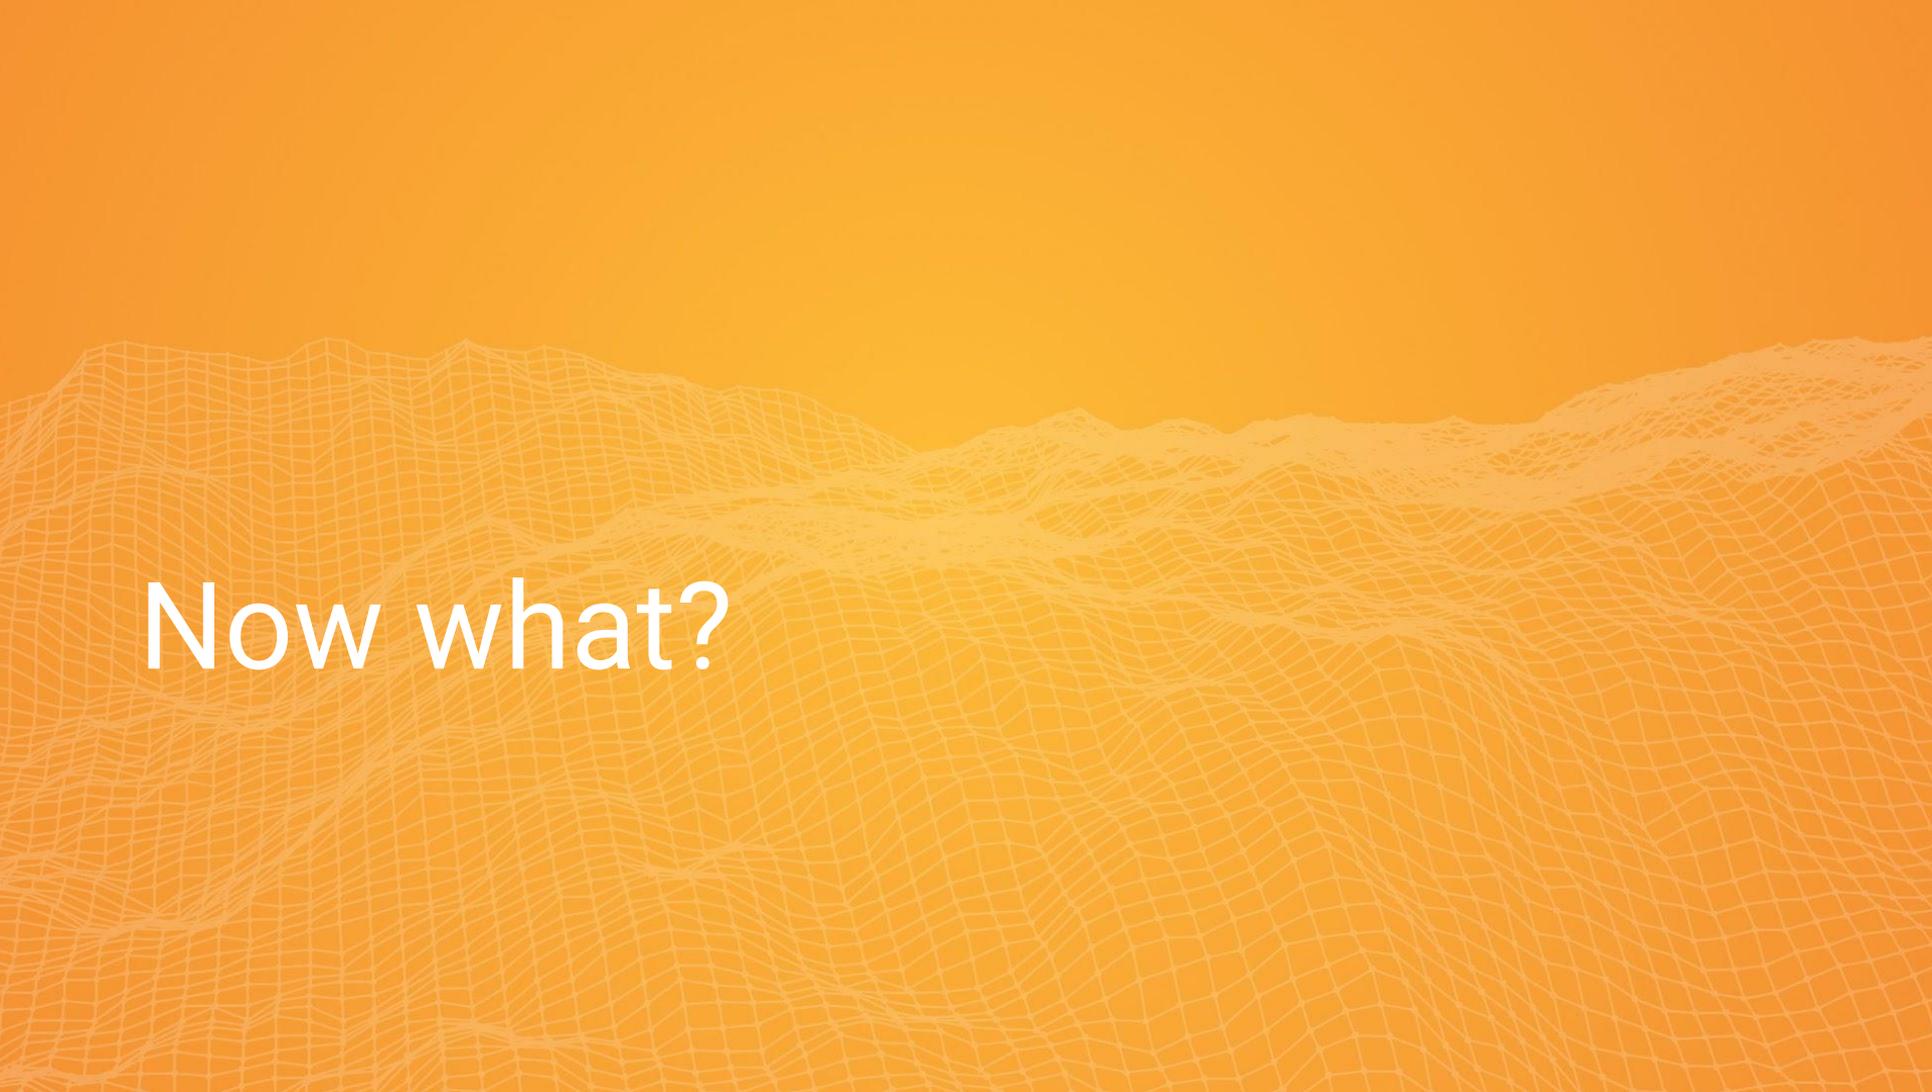

Go

Language Abstraction

Now what?

2016-06-08 06:47:45
