

# Hybrid Mobile Applications using PhoneGap

QCon SF 2011  
@davejohnson

Adobe <3 PhoneGap

# Schedule

- Overview
- What is PhoneGap?
- How to write apps
- Community
- API overview
- How to extend PhoneGap
- Tooling
- Libraries
- Web VS Native

# HTML

# PhoneGap

# Worldwide Smartphone Sales Q3 2011

# What is PhoneGap?

# PhoneGap Pattern

1. Embed a chromeless browser in a native app
2. Create a “bridge” between the browser and the native code
3. Write a web app
4. Package the web app with the native code and deploy to devices!

Write once *debug* everywhere

To know me is to  
know pain...  
and also rainbows.

# Supported Platforms

iOS  $\geq$  3.2

Android  $\geq$  1.5

BlackBerry  $\geq$  4.6

webOS  $\geq$  1.4.5

Symbian  $\geq$  1

Windows Phone  $\geq$  7.5

# Lay of the Land

iOS ..... Objective C  
Android ..... Java 'Harmony' / C++  
BlackBerry ..... Java J2ME / C++ (maybe?)  
webOS ..... HTML, CSS and JS  
Windows Phone 7 ... .NET bs  
Bada ..... C++

# Deprecated

# Prototype Platforms

Qt

OS X

Windows

PlayBook

# MIT/BSD/APACHE

# Our Community

PhoneGap === Callback

<http://github.com/callback/>

How do you write  
PhoneGap apps?

# HTML

# Mobile web first!

- Basics.
- Tooling.
- Libraries.

# HTML(5)

```
<button>I'm native codes!</button>
```

# Setup the Viewport

```
<meta name="viewport" content="
  width=device-width, initial-scale=1.0,
  maximum-scale=1.0, user-scalable=no;" />
```

# Android Trick

`target-densitydpi=device-dpi`

# Basics: CSS3

- Media queries come in handy for tablets
- Many folk using precompilers these days
- Opacity, rounded corners, gradients and fucking drop shadows fuck ya!

# Transformations

`-webkit-transform:`

`translate3d(x,y,z) scale3D(1,1,1.0)`

# Media Queries

```
<link rel="stylesheet"  
      media="all and (max-device-width: 480px)"  
      href="iphone.css">
```

# Media Values

```
<link rel="stylesheet"  
      media="all and (max-device-width: 480px)"  
      href="iphone.css">
```

- all
- max-device-width: 480px
- min-device-width: 481px
- orientation: portrait
- -webkit-min-device-pixel-ratio: 2

# General Tricks

- `window.devicePixelRatio`

# Startup

```
<script>
document.addEventListener('deviceready',
    function() {
        alert('WINNING!');
    }, false);
</script>
```

```
<!DOCTYPE html>
<html>
  <head>
    <title>Vanilla</title>
    <meta name="viewport" content="
      width=device-width, initial-scale=1.0,
      maximum-scale=1.0, user-scalable=no;
    " />
    <link rel="stylesheet" href="css/app.css"
      type="text/css" media="screen">
  </head>
  <body>
    <h1>Vanilla!</h1>
    <p>Ice Ice Baby</p>
    <!-- always put phonegap.js first!!! -->
    <script src="phonegap-0.9.4.js"></script>
    <script>
document.addEventListener('deviceready', function(){
  alert('rock a mic like a vandal')
}, false);
    </script>
  </body>
</html>
```

Can you put PhoneGap  
apps in the App Store /  
Android Market / whatever?

funnyPics.Dk

# Take note

- HTML, JS, CSS etc included in app package
- HTML loaded on file:// URI scheme, no cross domain request restrictions
- Engineering wise, approach is simple to extend to new platforms

Who dreamed up the  
PhoneGap APIs?

# PhoneGap APIs

- Sensors
- Data
- Events

<http://docs.phonegap.com>

# Sensors

- GPS
- Accelerometer
- Compass
- Network
- Camera

# Data

- **Contacts**
- **Media**
- **File system**
- **Notifications**

# Events

- onload
- onnative-ready
- onresume
- onpause
- ondevice-ready  
(onnative-ready + onDOMContentLoaded)

# W3C

- [dev.w3.org/geo](http://dev.w3.org/geo)
  - geolocation + deviceorientation + devicemotion
- [dev.w3.org/dap](http://dev.w3.org/dap) (device apis and policy)
  - contacts, calendar, HTML media capture, Media capture api, Messaging, System info
- [webapi](http://webapi)
  - Web notifications

# HTML

# HTML5

- `<canvas>`
- `<audio>`
- `<video>`
- Drag and drop
- File API
- History API
- Cache manifest
- `postMessage`
- Web SQL
- `localStorage`
- Sockets
- Workers

<http://dev.w3.org/html5/spec/Overview.html>

# API “design”

The “standards” are a mess.

Quotes here are not ironic.

# Browser APIs...

```
|navigator.geolocation.getCurrentPosition(win, fail, {});
```

# Or maybe like this?

```
window.ondevicemotion = function(e) {  
    var x = e.accelerationIncludingGravity.x  
    ,    y = e.accelerationIncludingGravity.y  
    ,    z = e.accelerationIncludingGravity.z  
}
```

```
window.ondeviceorientation = function(e) {  
    var x = e.beta  
    ,    y = e.gamma  
    ,    z = e.alpha  
}
```

# Browser Persistence APIs

- SQLite has been a complete fuck up.

# WAC

- formerly JIL and BONDI
- a carrier consortium

# WAC

```
deviceapi.accelerometer.getCurrentAcceleration(function(a) {  
    var x = a.xAxis  
    ,   y = a.yAxis  
    ,   z = a.zAxis  
});
```

# Browser Media APIs

- Lets not even go here..
- Audio and video are horribly fucked up
- **ESPECIALLY** on mobile
- We fix 'em (attempt to) w/ PhoneGap tho!

# DAP Media Capture

```
navigator.device.capture.captureImage(success, error, {});
```

```
// of course media capture also means:
```

```
// - audio
```

```
// - video
```

```
// - static images
```

# DAP System Info

```
navigator.system.watch("Power", win, null, {lowThreshold:0.2});
```

# DAP Sys Info

```
navigator.system.get("Network", win, null);
```

# DAP API Overview

Contacts

Calendar

Media Capture

Messaging

Gallery

App Launcher

Tasks

# 2.0

# The Future

- Tooling (command line and otherwise)
- WebGL
- Web Intents
- Continue polyfilling HTML5

# How do I extend PhoneGap?

# Plugins to the rescue

# Remaining work

- Discovery
- Packaging
- Installation
- Identity

# PhoneGap Plugins 1.0

## Core

Maintained by us.

## Community

Wild west!

## Partner

Maintained by you; verified by us. =)

# Plugins

- HTML5 Menu
- Push notifications
- Ads
- Analytics
- Barcode scanning
- Facebook Connect

<http://github.com/phonegap/phonegap-plugins>

**What tooling is  
available?**

# Compilers / Minifiers

- YUICompressor
- Google Closure
- UglyfyJS

# IDES

- Textmate (PhoneGap bundle)
- Eclipse (AppLaud plugin for Android)
- Dreamweaver (CS 5.5)
- Vim

# Emulators

- Every SDK has one. Most of them suck.
- WebKit
- Ripple

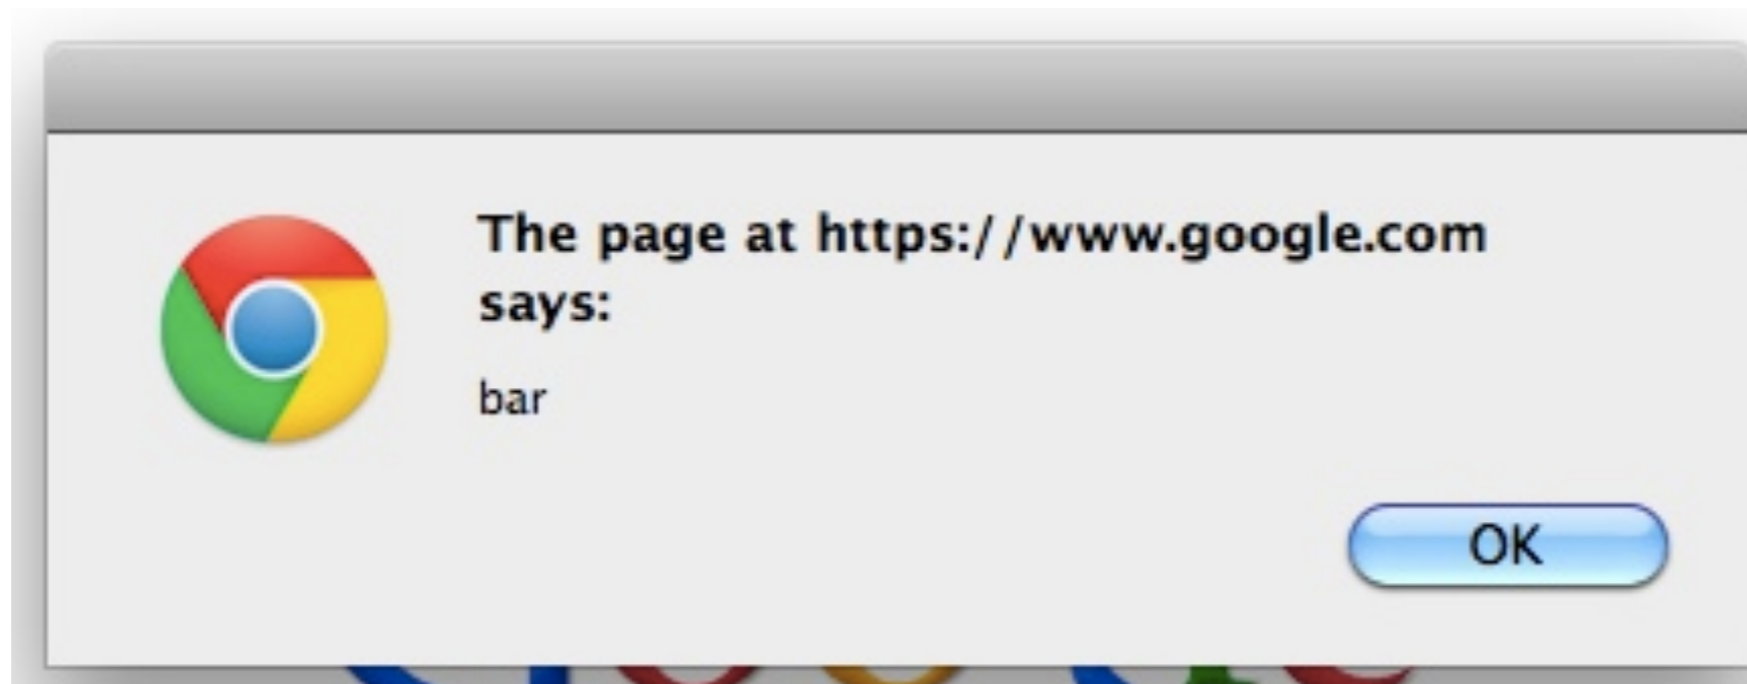

# Debuggers

- WebKit nightly is your friend. Mine too.
- Weinre

# HTML5 Debugging

```
> console.log( 'foo' )  
> foo
```

# HTML4 Debugging

# HTML

**What libraries are  
available?**

# DOM Libs

- XUI
- Zepto
- jQuery
- Dojo

# Canvas Game Libs

- PropulsionJS
- EaselJS
- GameJS
- CraftyJS
- LimeJS
- jGen

# Style / GUI Libs

- jQuery Mobile
- Sencha Touch
- Dojo Mobile
- Jo
- GloveBox
- Ekiben

# Persistence Libs

- Lawnchair
- StorageJS
- PersistJS

# Testing Libs

- QUnit
- Jasmine
- DominatorJS
- ThumbsJS

# Web VS Native?

<http://www.flickr.com/photos/40336611@N08/3705419486/sizes/z/>

# The Web *is* Native

“We could probably *save 70% of our development budget* by switching to a single, cross-platform client, but we would probably *lose 80% of our users.*”

-- Phil Libin, Evernote CEO

**“97.25% of statistics are wrong”**

**-- Anonymous**

“we’d be shut out of most app stores and go back to worrying about distribution.”

-- Phil Libin again

“huh?”

-- Me

**\$4,000,000,000**

**NETFLIX**

**What would Reed say?**

**“What’s wrong with  
Qwikster?!?!?”**

**-- Maybe Reed Hastings, Netflix CEO**

**“Are you crazy!?!?!”**

**-- Maybe Reed Hastings, Netflix CEO**

**Why are they using it?**

# Skills reuse

# Time to market

**Less code**

# App updates

# A/B Testing

Building for *hundreds*  
of devices!!1!1

 **Michael Clark** My contribution to the3six5 project got accepted and is up, warts and all. Not my finest literary hour, but give it a go, anyways. My ego needs you.

Can the Web *feel* Native?

**It can never be.**

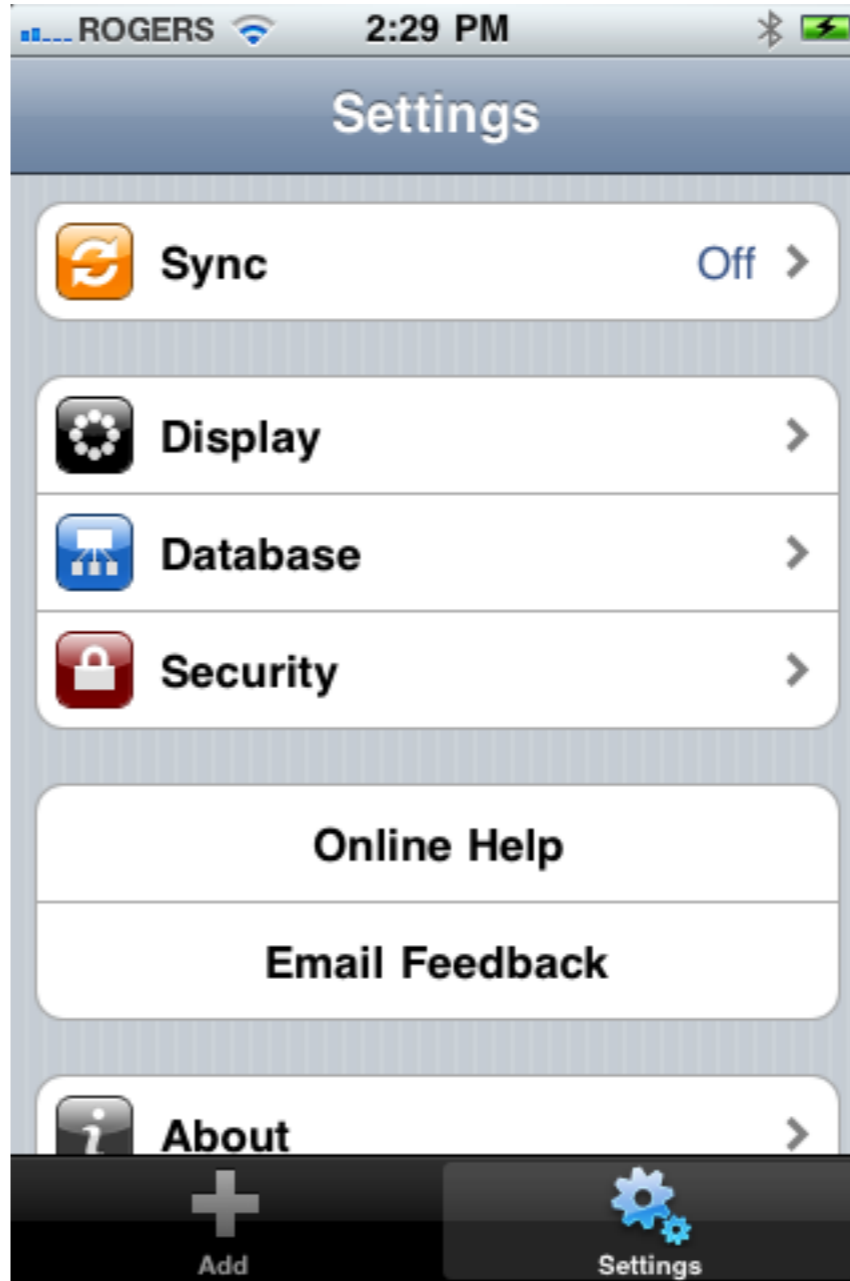

“What you call love  
was invented by guys  
like me to sell nylons”

-- Don Draper, Mad Men

“What you call APPS  
were invented by guys like  
me to sell HARDWARE”

**“Be the needle  
not the haystack”**

**-- Don Draper, Mad Men**

# Games?

# Mafia Wars - SHAKEDOWN

**BATTLE FRIENDS • DEFEAT BOSSES • RULE THE WORLD**

The image shows two smartphones displaying the game interface. The left phone displays a 'Rare Gems' screen with a 'Rewards: +600' notification and several gem icons. The right phone displays a 'FIGHT' screen with two characters, Chris and Mike, and a 'FIGHT' button. The background of the game interface is dark blue with yellow stars and a city skyline.
